Name of shape: _____	Faces: _____ Edges: _____ Vertices: _____

Welcome to our 3d Shapes Worksheets page. Geometry Riddles Using riddles is a fun and interesting way to see whether your child can apply their geometry knowledge to solve problems. NB. Both pairs of opposite sides are parallel. Pentagon (Regular) 5 sides All sides and angles equal Irregular Pentagon Hexagon (Regular) 6 sides All sides and angles equal Irregular Hexagon Octagon (Regular) 8 sides All sides and angles equal Irregular Octagon 2d Shapes Worksheets The worksheets have been divided into 2 different sections. Due to the differences in shape terminology in US and UK, some of the worksheets have 2 different versions. These 3d shapes worksheets have been divided into 4 different sections. They have 4 lines of symmetry. Have a look at some of the common 2d shapes that children should know at a 2nd grade level. How to Print or Save these sheets Need help with printing or saving? Follow these 3 easy steps to get your worksheets printed out perfectly! Math-Salamanders.com Whether you are looking for a free Homeschool Math Worksheet collection, banks of useful Math resources for teaching kids, or simply wanting to improve your child's Math learning at home, there is something here at the Math Salamanders for you! The Math Salamanders hope you enjoy using these free printable Math worksheets and all our other Math games and resources. All isosceles triangles have a line of symmetry. Rectangle Rectangles have 4 sides and 4 right angles. Symmetry is introduced at this level, and children learn to find lines of symmetry by folding shapes or using mirrors. Transformations on 2d shapes are explored in the following areas: enlarging; reducing; reflecting or flipping; rotating or turning. Do you want some help getting to know your types of triangles? Square-based Pyramid Square-based pyramids have 5 faces, 8 edges and 5 vertices The base is a square. Triangular-based Pyramid Triangular-based pyramids have 4 faces, 6 edges and 4 vertices. All sides on a cube are equal length. For more information on the information we collect, please take a look at our Privacy Policy If the error message 'File Unavailable' should appear in a pop-up window with a 'RELOAD' option in the bottom right corner of the screen: Don't click the RELOAD link - it doesn't do anything click anywhere on the screen but not inside the pop-up window should disappear and you should be able to see your results. Obtuse Triangle Obtuse triangles have one obtuse angle (an angle greater than 90°). Trapezium US (Trapezoid UK) Trapeziums US (Trapezoids UK) are quadrilaterals with no parallel sides. Children also start to look more closely at the properties shapes have to categorise them. The first section is all about different types of triangles - equilateral, isosceles, scalene, as well as right, acute and obtuse triangles. Using these 2d shapes worksheets will help your child to explore and identify different transformations that can be done on 2d shapes. Using the sheets in this section will help your child to: name a range of 3d shapes; identify different types of pyramids, prisms, cuboids, cones, cylinders and spheres; learn some simple properties of 3d shapes: faces, edges and vertices; recognise some 3d shapes in different orientations. Triangular Prism Triangular Prisms have 5 faces, 9 edges, and 6 vertices. This page should hopefully be what you are looking for! The worksheets and resources on this page should help you to identify a range of 2d shapes and give your child an opportunity to practice their 2d shape knowledge with some useful worksheets. If the triangular faces making up the prism are all equilateral, then the shape is also called a Tetrahedron. The main focus on this page is the identification of different types of triangles: equilateral, isosceles and scalene, as well as right, acute and obtuse. Some parallelograms have lines of symmetry (depending on whether they are also squares, rectangles or rhombuses), but most do not. Follow these 3 easy steps to get your worksheets printed out perfectly! How to Print or Save these sheets Need help with printing or saving? The two faces at either end are hexagons, and the rest of the faces are rectangular. Cylinder Cylinders have either 2 or 3 faces, 0 or 2 edges, and 0 vertices. The second section worksheets involve tracing and naming common 2d shapes that you will find on this page. Try our NEW quick quiz at the bottom of this page. Some of the main properties are also listed for your information. There is a range of worksheets - some with the shapes in 'usual' orientations and some with shapes in different orientations to help children to become familiar with the properties of the shapes and get used to shapes in different positions. 2D Shapes Worksheets Need to be able to identify 2d shapes? During 2nd grade, children are introduced to a wider range of 2d and 3d shapes. Using the sheets in this section will help your child to: apply their geometry knowledge to solve a range of problems. Here you will find our selection of free shape worksheets to help your child to name and learn some of the properties of the 3d shapes they will meet at 2nd grade. All of the other faces are triangular. This section is a great way to extend more able mathematicians. All the sheets in this section will help your child to apply and consolidate their geometry learning. Here you will find our selection of free shape worksheets to help your child to recognise and name some of the 2d shapes they will meet at 2nd grade. Hexagonal Pyramid Hexagonal pyramids have 7 faces, 12 edges, and 7 vertices. You can print a copy of your results from this page, either as a pdf or as a paper copy. Math-Salamanders.com Whether you are looking for a free Homeschool Math Worksheet collection, banks of useful Math resources for teaching kids, or simply wanting to improve your child's Math learning at home, there is something here at the Math Salamanders for you! The Math Salamanders hope you enjoy using these free printable Math worksheets and all our other Math games and resources. Cuboid Cuboids have 6 faces, 12 edges and 8 vertices. Square Squares have 4 equal sides and 4 right angles. There is a range of worksheets - a selection of identifying, shading, naming and finding the properties of 3d shapes. Equilateral Triangle Equilateral triangles have all angles equal to 60°, and all sides equal length. Right Triangle Right triangles (or right angled triangles) have one right angle (equal to 90°). All squares are also parallelograms. Worksheets Take a look at some more of our worksheets similar to these. All the other faces are triangular. Page 2 Welcome to the 2nd Grade Math Salamanders 2d Shapes Worksheets page. The main focus on this page is the identification and properties of different types of 3d shapes: cubes, cuboids, prisms, pyramids, cones, cylinders and spheres. The two faces at either end are triangles, and the rest of the faces are rectangular. These worksheets involve shading a range of 3d shapes according to their type: cone, cylinder, cuboid, prism, pyramid. Take a look at some more of our worksheets similar to these. 2D Shapes Worksheets The worksheets on this page are all about identifying different 2d shapes. They all have 2 lines of symmetry (4 lines if they are a square!) All rhombuses belong to the parallelogram family. At a 2nd grade level, we do not need to know the precise shape names for pyramids and prisms, it is enough to know that a hexagonal pyramid is a type of pyramid, and a pentagonal prism is a type of prism. A cube is a type of cuboid. Cone Cones have either 1 or 2 faces, 0 or 1 edges, and 1 apex (which is described by some mathematicians as a vertex). The main focus is on identifying triangles, but other 2d shapes are also explored. At the faces on a cuboid are rectangular. Using the sheets in this section will help your child to: name a range of 2d shapes; identify different types of triangles; learn some simple properties of 2d shapes; recognise 2d shapes in different orientations. All faces are square in shape. Looking for some worksheets to help you to identify some common 2d shapes? This webpage is all about identifying different transformations for 2d shapes. Trapezoid US (Trapezium UK) Trapezoids US (Trapeziums UK) have one pair of parallel sides. All equilateral triangles have 3 lines of symmetry. Using the sheets in this section will help your child to: learn the name of common 3d shapes; learn to recognise some of the simple properties that 3d shapes; categorise the 3d shapes by different criteria. All of the faces are triangular. This error is a Google error in the Google Quiz app - it is currently unresolved! We would be grateful for any feedback on our quizzes, please let us know using our Contact Us link, or use the Facebook Comments form at the bottom of the page. Then these 3d shapes worksheets should hopefully be what you are looking for! The worksheets and resources on this page should help you to identify a range of 3d shapes and give your child an opportunity to practice their 3d shape knowledge with some useful worksheets. We welcome any comments about our site on the Facebook comments box at the bottom of every page. During 2nd grade, children are introduced to a wider range of 2d and 3d shapes. Looking for some worksheets to help you to identify some common 3d shapes? At a 2nd grade level, children should learn to: categorise triangles into right, equilateral and isosceles special cases; categorise members of the quadrilateral family according to their properties; identify a range of 3d shapes such as cylinders, spheres, cones, prisms and cuboids; identify lines of symmetry; identify a shape which has been flipped or folded. Using these sheets will help your child to: name a range of 2d shapes; identify different types of triangles; learn some simple properties of 2d shapes; recognise 2d shapes in different orientations. The sheets involve naming and noticing some of the properties that 3d shapes have. They all have 2 lines of symmetry (4 lines if they are a square!) All rectangles belong to the parallelogram family. Cube Cubes have 6 faces, 12 edges and 8 vertices. Isosceles Triangle Isosceles triangles have 2 angles equal and 2 sides of equal length. The riddles in this section are all about 2d and 3d shapes, and your child has to identify the correct shape from a selection based on the information in the riddle. Need to be able to identify 3d shapes? All the sheets in this section will help your child to become more familiar with many of the 3d shapes around them, and learn about some of their properties. For incorrect responses, we have added some helpful learning points to explain which answer was correct and why. The third section is the hardest section and involves trying to draw different 2d shapes using a dotted grid to help. Sphere Spheres have either 0 or 1 faces, 0 edges and 0 vertices. At the end of the quiz, you will get the chance to see your results by clicking 'See Score'. Please note the differences between the definitions for US and UK. Curved sides and straight sides in 2 dimensions, and curved and flat surfaces in 3 dimensions are identified. This will take you to a new webpage where your results will be shown. Children are encouraged to look more closely at shapes to recognise the differences between how the shapes are made up. Transformation Worksheets (2d) This webpage is all about identifying different transformations for 2d shapes. We collect this information so that if a class of students is taking a quiz, the individual results can be recorded along with the first name of the student. Hexagonal Prism Hexagonal Prisms have 8 faces, 18 edges, and 12 vertices. Please note the differences between the definitions for US and UK. All squares belong to the rectangle family. Scalene Triangle Scalene triangles have no angles equal, and no sides of equal length. We do not collect any personal data from our quizzes, except in the 'First Name' field which is optional. All squares belong to the rhombus family. Using riddles is a fun and interesting way to see whether your child can apply their geometry knowledge to solve problems. Transformation Geometry Worksheets Here you will find our 3d shape worksheets for second graders. Need to know the properties of common 3d shapes? Parallelogram Parallelograms have 2 pairs of parallel sides. The other two angles are acute (less than 90°). Some trapezoids have a line of symmetry. Our quizzes have been created using Google Forms. Want to test yourself to see how well you have understood this skill? The base is a hexagon. We also collect the results from the quizzes which we use to help us to develop our resources. Our quizzes have been created using Google Forms. Acute Triangle Acute triangles have all angles acute. Identifying Triangles Name and Trace the 2d Shapes (The base is a triangle).
